

# General Surgery Gastrointestinal Endoscopy

Friday 23 October 2026

This all new CTEC workshop is designed to provide a thorough grounding in the fundamentals of endoscopy and colonoscopy. This workshop will deliver exceptional training within a simulated environment, equipping participants with the skills to execute these procedures safely and effectively, for diagnostic and certain therapeutic interventions.

It is intended that participants will deepen their understanding and confidence in the Core level training standards required for certification with the Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy.

This workshop utilises animal tissue simulation models to provide Trainees with fundamental knowledge of the structure, function and ergonomics of endoscopy. It explores the basics of gastroscopy and colonoscopy, trouble shooting and handling, an introduction to basic and intermediate endoscopy and interventions, the

concept of looping and how to avoid it and the complications of scopes. The workshop will conclude with a participant Quiz focusing on workshop content.

## Workshop Content

**Participants will benefit from close supervision by expert faculty from the disciplines of Surgery and Gastroenterology.**

### Demonstration and Hands-On Sessions:

- Basic techniques
- Air insufflation and suction
- Driving the scope
- Argon gas coagulation

### Hands-On Sessions:

- Loading the scope
- Biopsy and snaring
- Endoscopic management of Upper GI bleeding (Gold probe)
- Injection of adrenaline
- Clipping
- Basics of colonoscopy

### Presentations:

- *Endoscopy Training in the 21st Century*
- *Getting Started and Preparation for Endoscopy*
